Central Research & Planning Cell

VKCL has a central research and development cell where industrial engineers and other specialist contribute to:

- Designing the most appropriate machine layout for a particular style
- Suggesting improved work method
- Recommending use of special work-aids
- Reducing re-work and re-process
- Raising productivity, improving efficiency, and ultimately contributing to production cost

Quality Assurance

VKCL is very well known to the customers' community for excellent workmanship and product quality assurance through its efficient workforce and procedures:

- Each of the manufacturing unit is equipped with independent QC cells
- Risk analysis, pre-production meeting, pilot runs & wearer trials
- Stringent quality checks at every process in sewing, cutting and finishing
- Adequate QC teams focusing right at the beginning of every process and thus reducing rejection rates
- Use of Light Box for checking shade variation in the fabrics and separating shade lots
- Ensuring AQL 1.5
